Profile

Dedicated Backend Web Developer with expertise in Laravel. Skilled in building robust APIs and scalable architectures. Proficient in implementing clean, intuitive MVC structures and delivering secure, high-performance solutions. Passionate about leveraging AI tools to accelerate development, optimize workflows, and improve project quality. Continuously learning new technologies and collaborating on impactful digital projects.

Education

2022–present — **Bachelor Software & Informatics engineering**, *Salahaddin University - Erbil*, College of Engineering, Erbil

- Currently in the third year of the program, building a strong foundation in Software design principles and mathematics.
- Developing an understanding of artificial intelligence, security, networking, and server administration.
- Actively working on assignments and projects that focus on problem-solving and practical application of engineering concepts.

Self-Directed Learning, *Online Courses & Tutorials*

- Gained most of the knowledge in backend development, web-security, and networking through self-paced online courses and tutorials with hands-on real-life projects.
- Completed multiple YouTube courses covering PHP, Laravel, JSON APIs, MySQL, and server-side development.

Skills

Languages & Frameworks	PHP, Laravel, MySQL
Tools & Concepts	RESTful APIs, Swagger-Documentation, Cloudflare, OneSignal, Firebase, Git and GitHub, Filament (Laravel)
AI Tools & Workflow	Applying AI-powered tools to accelerate development, enhance code quality, and improve productivity.

Projects

Stadium Booking Application

- Developed a complete backend API for managing stadium bookings. The API was consumed by a Flutter application and an admin dashboard.
- Implemented role-based access, booking approval system, and commission management for owners.
- Built with Laravel (API), ensuring scalability and secure authentication.
- Features include Google Maps integration, booking history, notifications, and payment tracking.

Feedback System

- Developed a full-stack system to collect and manage feedback across Salahaddin University.
- Built with Laravel and MySQL.
- Included role-based access for students, department admins, college admins, and university admins to ensure secure data handling.
- Leveraged AI-assisted development tools to enhance efficiency and ensure clean, maintainable code.

Loan Management System

- Designed a system for a mobile store to automate loan tracking and installment management.
- Used Laravel with the Filament panel for a clean UI.
- Calculates monthly installments based on loan terms and tracks outstanding balances.

Department's Lectures

- Created a platform to organize and provide access to departmental lecture materials.
- Built with Laravel and Cloudflare for secure file storage.
- Lectures are organized by semester and subject for easy access.
